

888TRON

888TRON.COM

WHITE PAPER

BACKGROUND

The global gambling market is forecasted to reach revenues of over \$525 billion by 2023¹, but at least one study has shown that only 33% of people believe that gambling is fair and can be trusted². With a “Wild West” reputation, brick and mortar casinos are often portrayed in popular media as being associated with crime and unfair business practices³. And online gambling sites face the same image problem⁴. The 888Tron project was developed to offer the world’s citizens a trustworthy, decentralized, fair and fun online gambling resource.

INTRODUCTION

What is TRON.network?

TRON.network is a decentralized protocol based on distributed data storage technology. It provides a working platform for a global entertainment system that offers free content. By using the TRON protocol, users can publish, store, and distribute data. The platform also allows one to subscribe to any content and promote it by issuing and distributing digital assets. It is not insignificant that the protocol is the common property of all mankind, rather than a means to big profits reserved for a small group of people. All of TRON’s users have an equal opportunity to earn money if their projects are successful. TRON developers are convinced that the content created within the framework of the platform should first and foremost benefit everyone, rather than be focused solely on monetary gain. Because the founders of TRON adhere to the principles of decentralization, all users will always have equal and unlimited access to information, apps, and games. Nobody will interfere with this process or try to control it, let alone hinder it.

Users who distribute content in the form of various digital assets can set up their own smart contracts within TRON in order to create and distribute their own digital assets. In the future, everyone will be able to exchange these assets, play different offline games, check exchange forecasts, and use money earning systems.

Gambling and gaming businesses have shown themselves to be extremely profitable ventures⁵. But due to the growing need to win

INTRODUCTION

consumer confidence, it is not surprising that the industry is steadily moving towards blockchain technology. New important players are emerging in the market and they are going to dominate it in the near future. Currently, the market for digital entertainment, online casinos, online shows, social networks, and similar ventures is estimated at USD 1 trillion⁶. A share of this market will be captured by decentralized applications, including the 888TRON project.

Many investors assess the potential of TRON as colossal, and they do so for good reason⁷. In the future, one coin may cost one US dollar or more, because the use of blockchain technology and smart contracts solves many problems, including the issue of trust in gambling.

ABOUT PROJECT

www.888tron.com is a decentralized gaming platform based on the TRON.network blockchain. This project is public and strives to change the traditional approach to managing businesses in the gaming sector. The first users of the platform will have a unique opportunity not only to play games and win, but also to become co-owners of a highly profitable business.

The project is aimed at cryptocurrency users and enthusiasts who understand the value of blockchain technology and believe in its growth, development, and global application potential. Those who own 888TRON tokens become the owners of the platform. Tokens can only be obtained by those who play games using the platform. This protects 888TRON against a situation where tokens could become concentrated in the hands of outside investors who might try to manipulate the platform for personal gain. The platform's profits are intended for even and transparent distribution among all the token holders through a smart contract. Dividends will be paid in the TRX cryptocurrency, which is traded on all the largest cryptocurrency exchanges in the world. Over the course of the project's development, the team will receive tokens and dividends, but only if the project is successful.

A B O U T P R O J E C T

The games in this project will be absolutely unique and provide a source of stable and predictable income to the token holders. There will be well-designed mathematical models behind the games, high winning percentages, and all the buzz players crave from exciting games. Modern technology will be used, including open source smart contracts designed for all types of devices without the need for downloading.

The TRON.network blockchain was chosen by the development team for a reason. This network is primarily focused on entertainment and gaming products. Moreover, it is a high-performance network (about 2,000 transactions per second) which has low transaction costs (TRX 0.00001) and, most importantly, actively supports DApp developers.

When 888TRON is launched, the first users will be able to enjoy playing the games and get the platform's tokens anonymously. Fair play, equal conditions for obtaining tokens, and a fair and transparent mechanism for distributing dividends – all this will allow our team to stay in the background for a while. We want the results of our work to speak for us at the first stage of the project. However, in the course of popularizing and promoting the project at international cryptocurrency conferences, the team will inevitably become known to the public.

Despite the fact that cryptocurrencies and decentralized games do not fall under legal jurisdiction, the 888TRON team sees the need to legalize this project and intends to obtain the maximum number of gambling licenses worldwide. As the project progresses, the team will do everything possible to promote the project legally in all relevant jurisdictions in order for the project to have a good reputation as well as to be safe and convenient to use.

THE MINING PROCESS AND THE DIVIDEND MODEL

The TRX cryptocurrency is the main currency used by the www.888tron.com platform. The project's token has the TRC-20 format and 888 token is its registered name. The supply of tokens is limited and does not exceed 100,000,000 tokens. The process of mining 888 tokens by betting is divided into levels. Each level is limited by the time only and lasts 48 hours. At each level, players are able to mine an unlimited number of unmined tokens. The minimum starting bet for mining one 888 token is TRX 700. After each level is passed, the minimum bet to mine one 888 token will increase by TRX 10. Dividends are paid out at the end of each mining level – every 48 hours. You can check a countdown timer for the next dividends payout on www.888tron.com at Dividends section.

Dividends distribution is made in the TRX cryptocurrency among all 888 token holders who froze their tokens on smart contract before the end of current mining level in proportion to the number of tokens been mined and frozen.

After the process of mining finishes, dividends will be distributed automatically once every week (7 days). For example, you have 2% of the total volume of the platform's tokens. The platform's income over the reporting period has amounted to TRX 30,000,000. You will receive an income of $\text{TRX } 30,000,000 * 0.02 = \text{TRX } 600,000$.

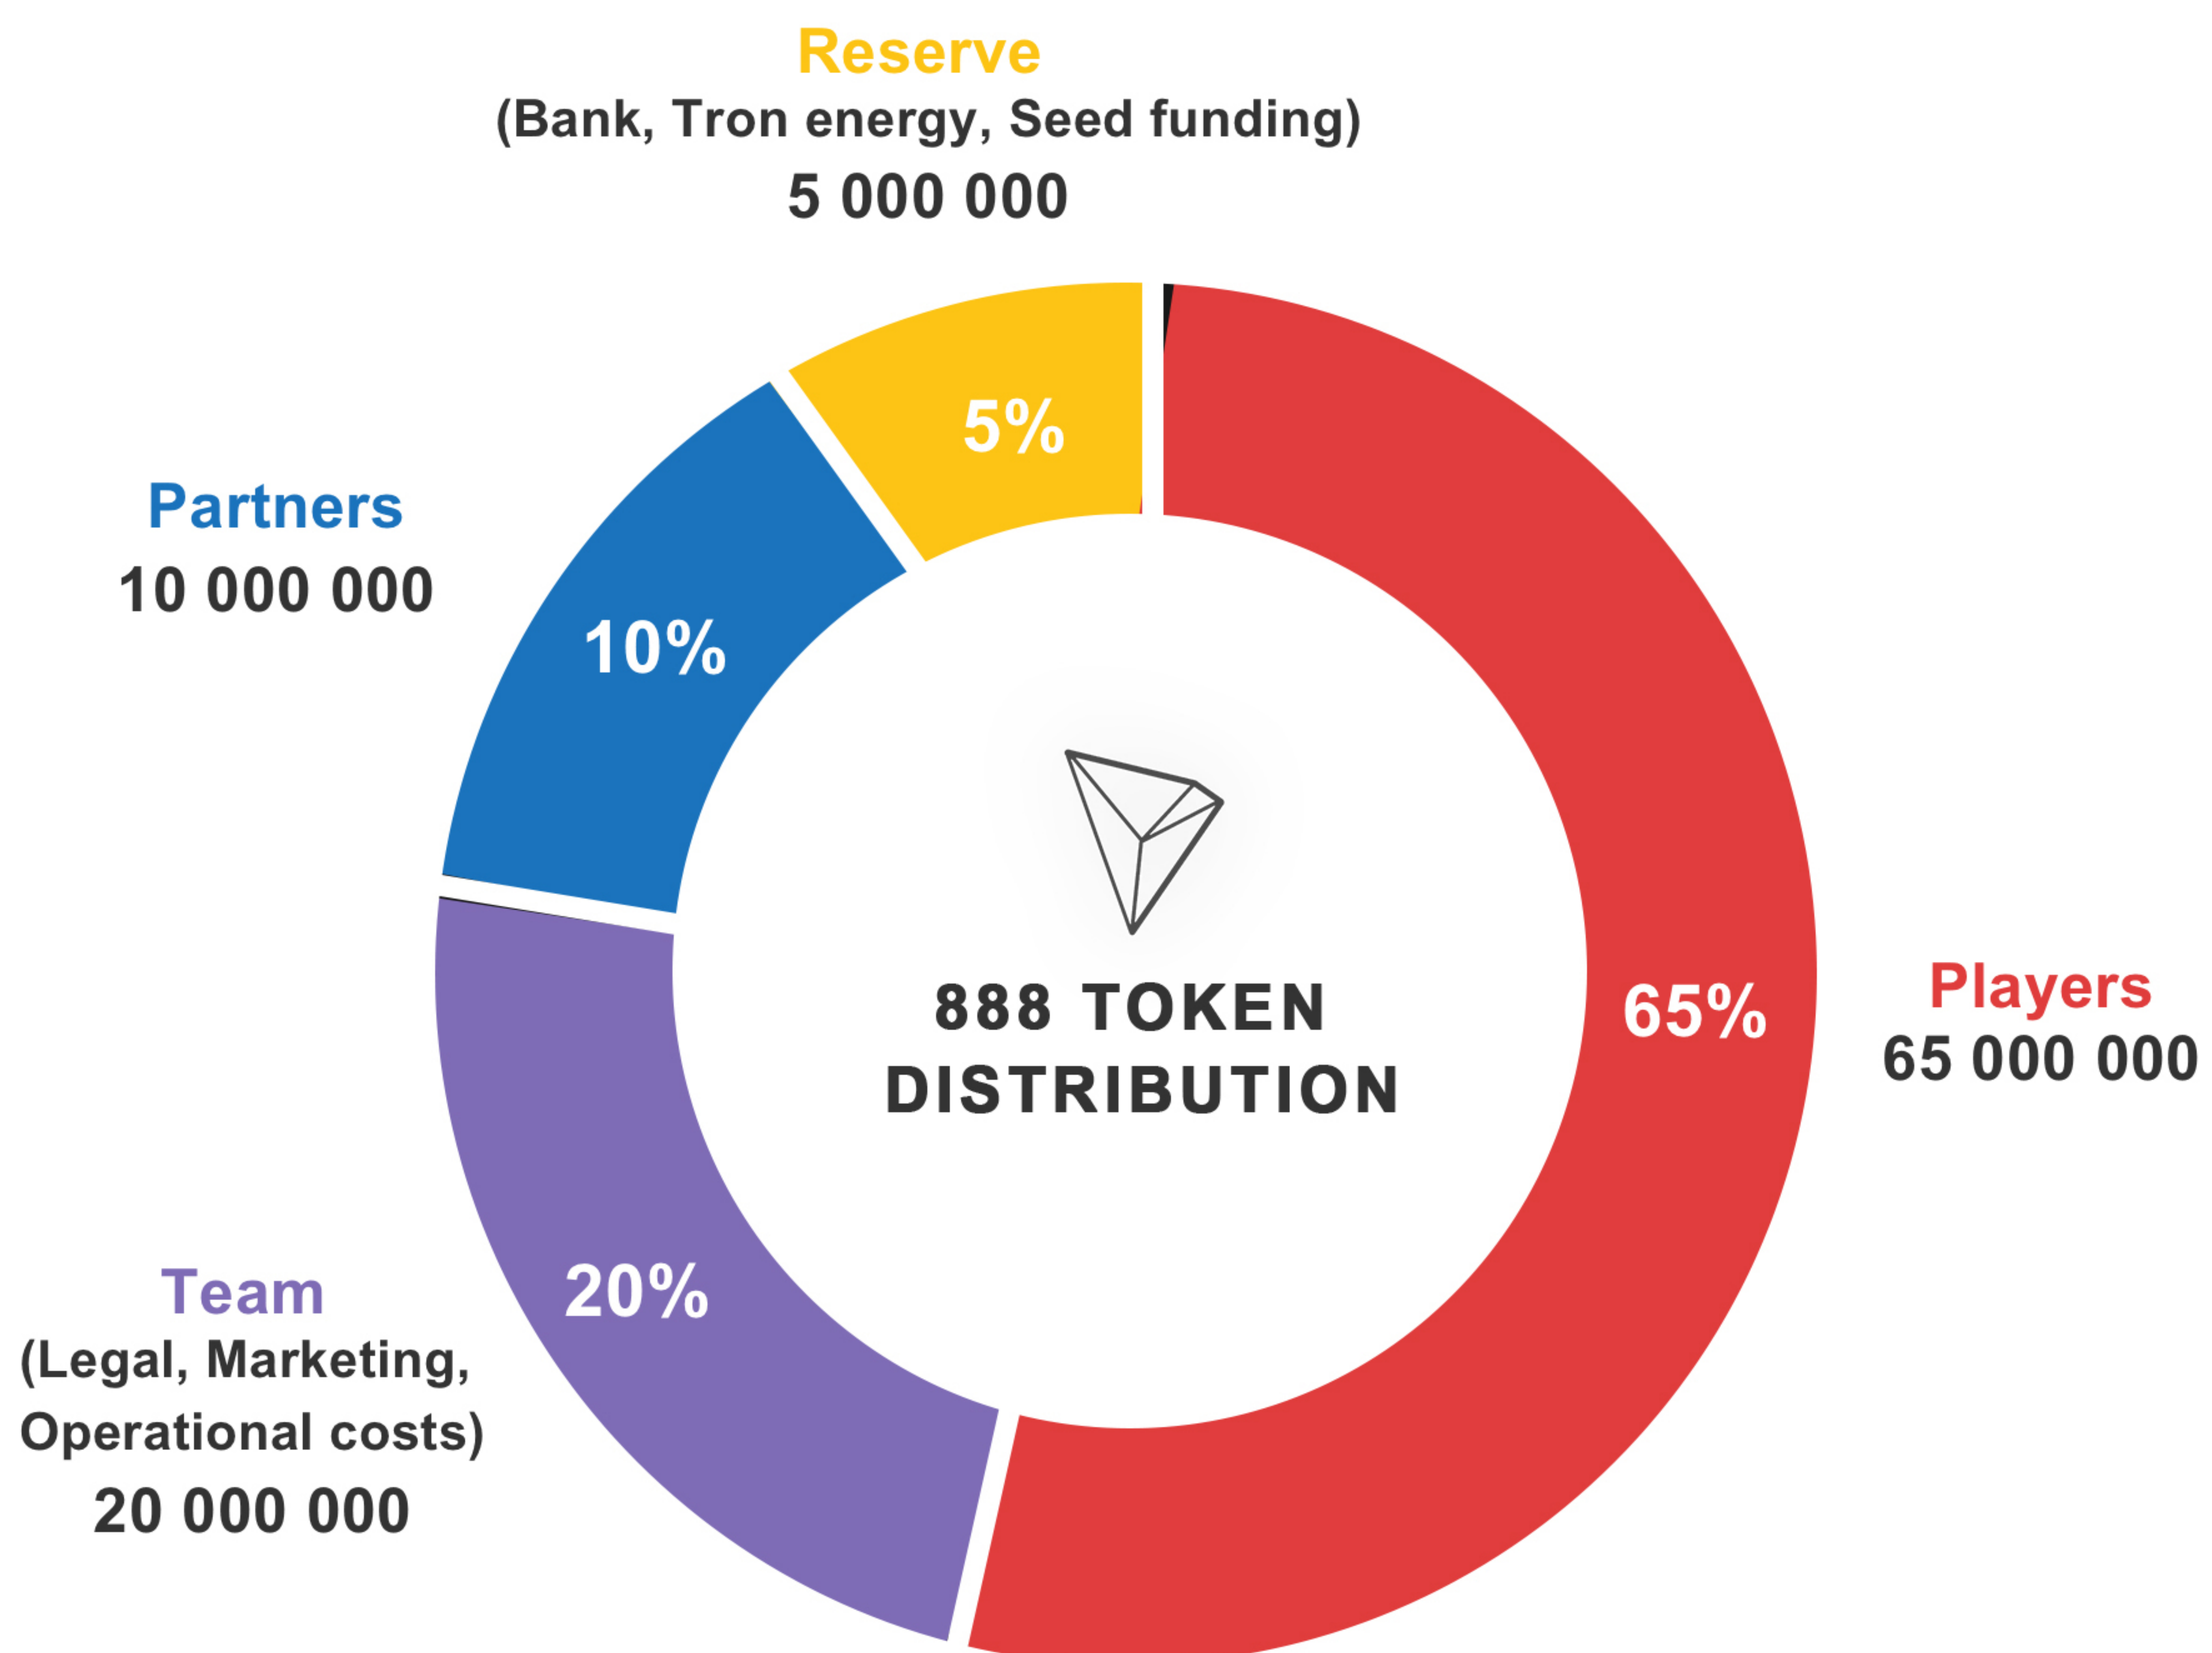

The following is an example of the size of bets for mining one token as a player progresses through each level:

Level	1	2	3	4
TRX Per Play	700	710	720	730
888 token	1	1	1	1

THE MINING PROCESS AND THE DIVIDEND MODEL

When the platform is launched, there will be no tokens in circulation. During the course of mining, each token mined will bring a reward in the amount of 0.5384615 of one token to the Team, Partners, and Reserve funds. At the end of mining, all the platform's tokens will be distributed according to the table below. In this way, fair and equal distribution of tokens and dividends among all the holders will be achieved over the course of the project's expansion.

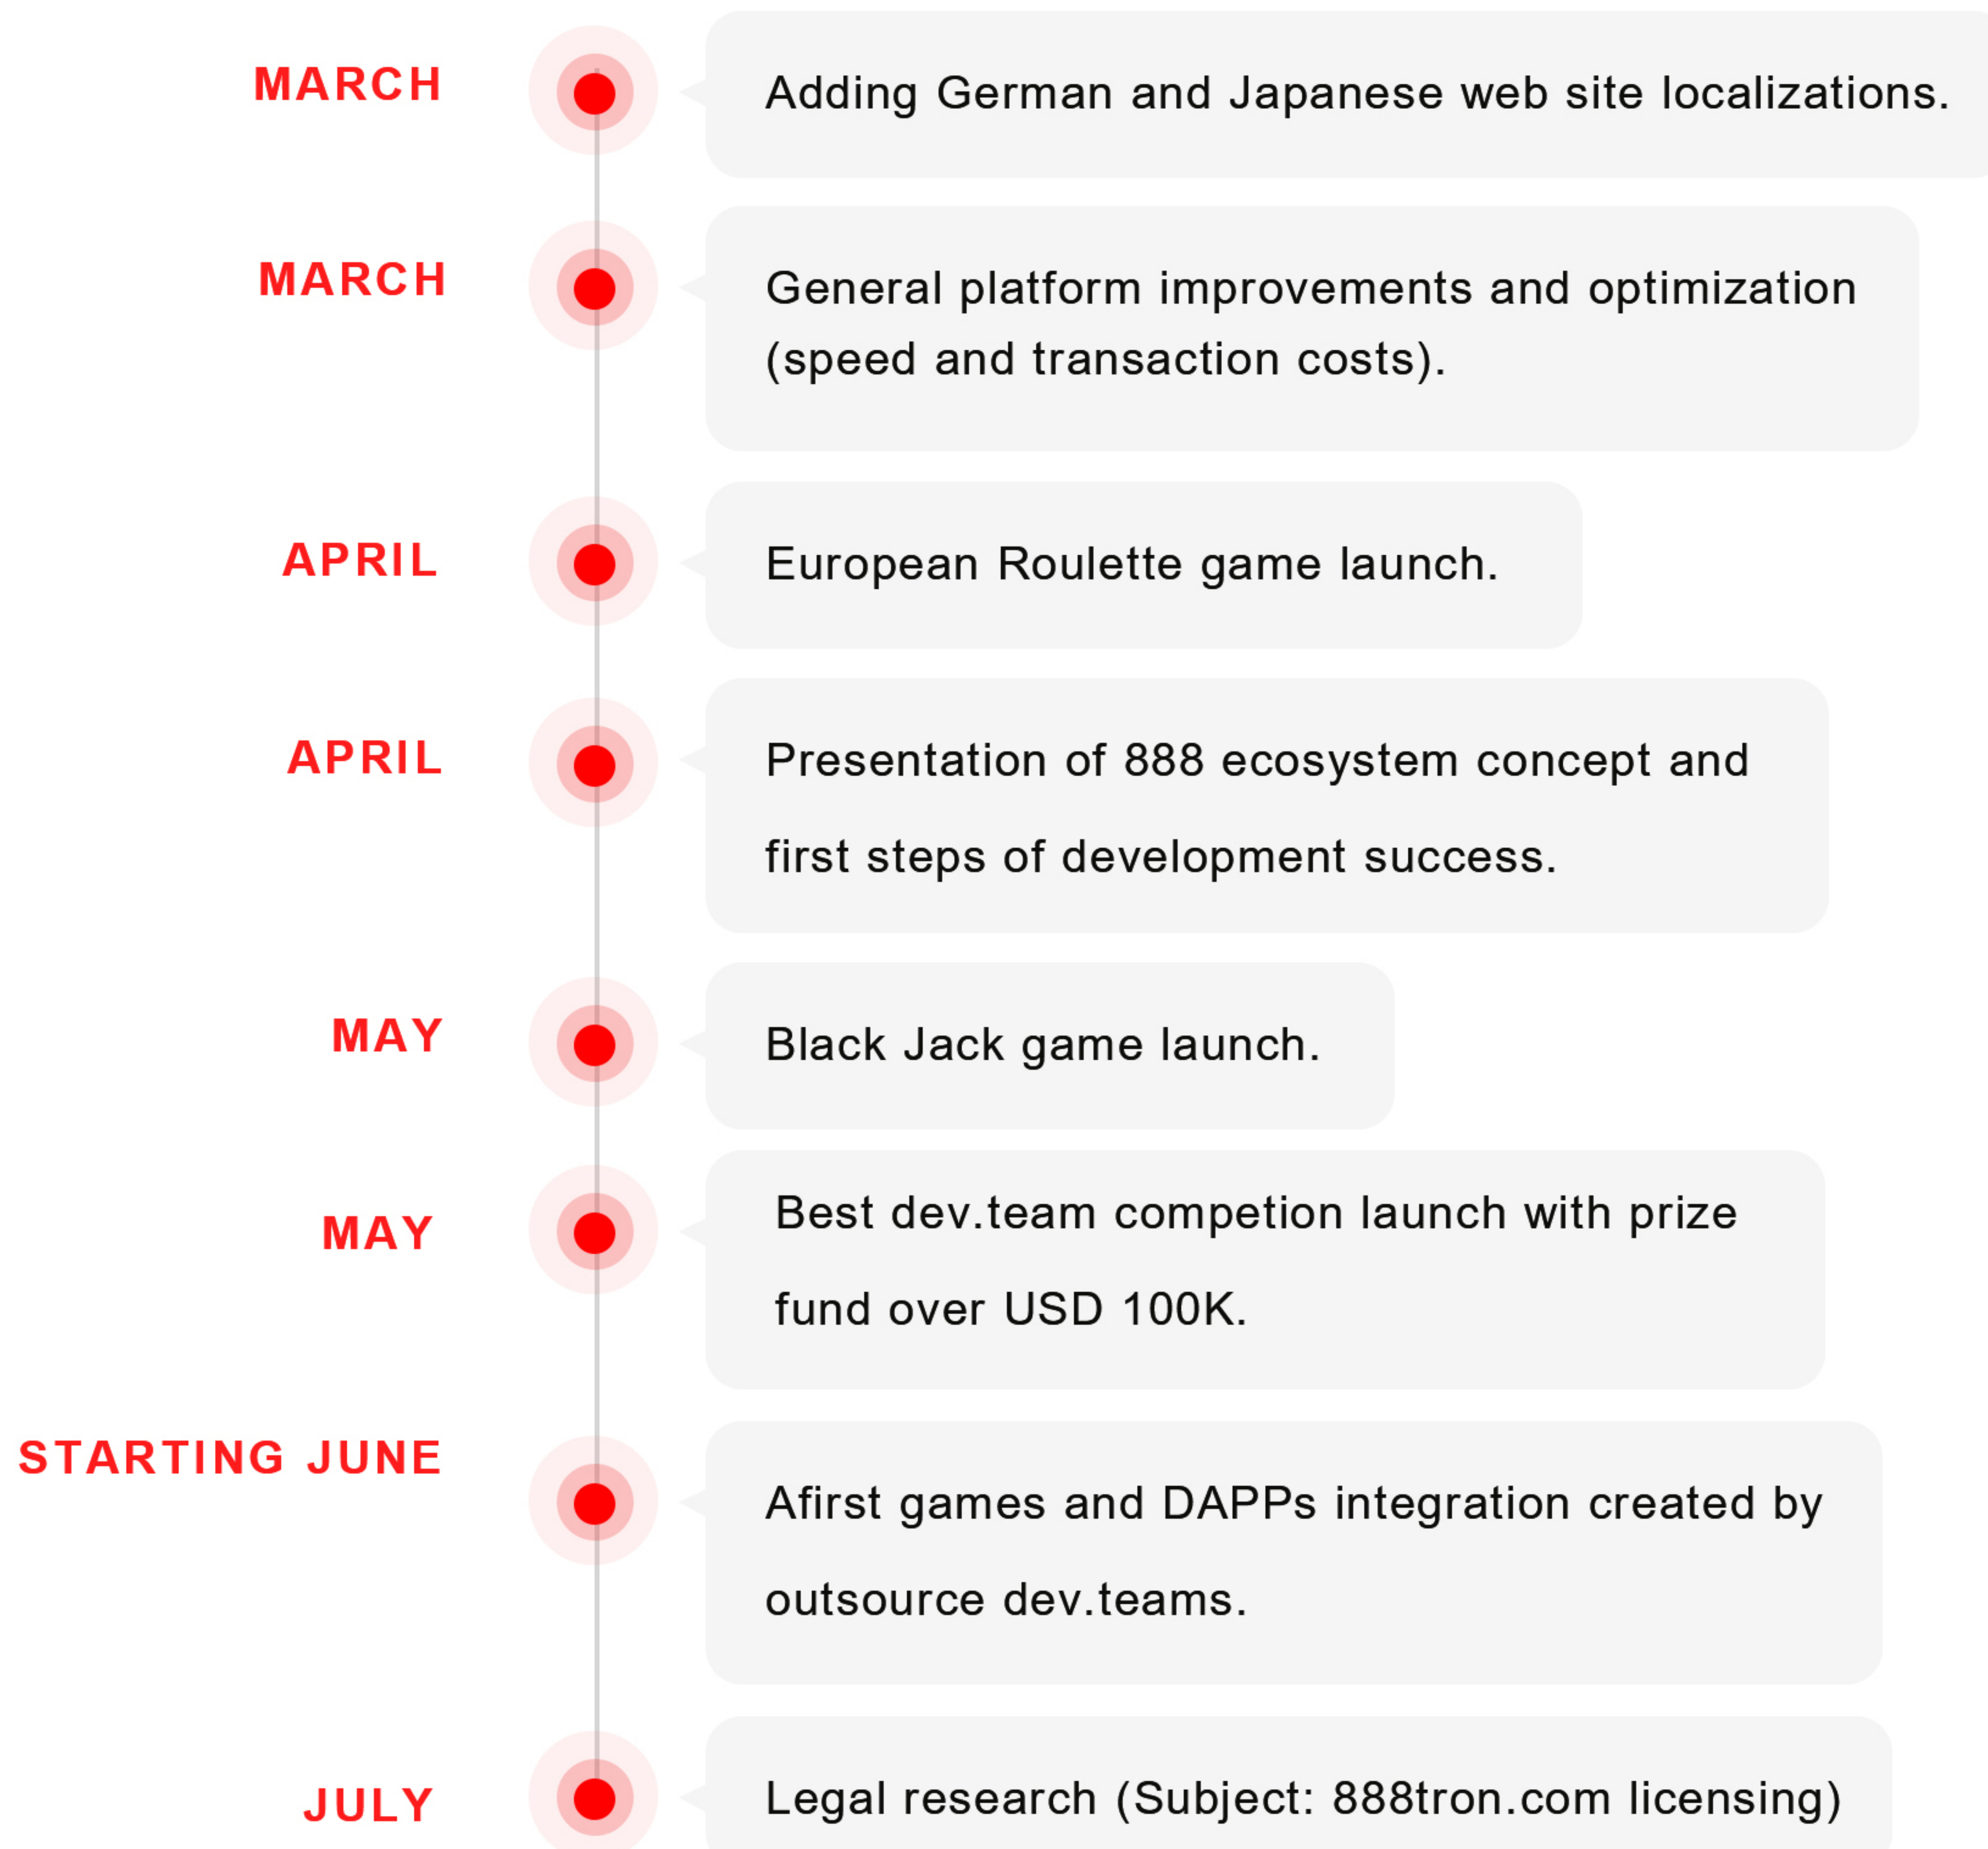

PLATFORM PROMOTION

Promotion and legalization of the platform will be carried out using tokens from the Team, Partners, and Reserve funds, as well as the dividends accrued to them.

Each player will also have the opportunity to earn a bonus percentage by inviting their friends to invest in the project. Players will earn 0.2% of all bets made by their referred players/friends. Bonuses will be automatically transferred through a smart contract to the promoting player's cryptocurrency wallet. It is easy to earn these referral bonuses — the player can simply copy a referral link and share it with friends and followers. The smart contract takes care of the rest.

ROADMAP

TOKEN LISTING

Once ~ 3% of all tokens will be mined, the 888 token will be listed on decentralized cryptocurrency exchanges (DEX) and exchanges specializing in security tokens. In order to determine the most popular exchange sites and prevent a fall in value of the token, the listing process will be subject to agreement between the holders.

L A W S A N D D I S C L A I M E R

Anyone under the age of 18 is prohibited from playing any game on the platform. Participation in games may lead to financial loss and the players are responsible for any possible risks. Players are advised not to spend more than they can afford to lose within the games.

888tron.com involves cryptocurrencies and token mining. When participating in token mining and platform games, players must take their local laws and regulations into consideration and avoid violation. We do not make any form of commitment, nor guarantee of the intrinsic value and appreciation of the token 888.
